

BEVERAGES CONTAINING WATER-SOLUBLE VITAMIN E

ABSTRACT

5 The present invention relates to beverage compositions that have
the added benefit of providing a water-soluble source of Vitamin E. For
example, *d,l*- or *d-α*-tocopheryl polyethylene glycol 1000 succinate (such as
Vitamin E TPGS™) may be used to provide tocopheryl (i.e., vitamin E)
content to beverages while concurrently maintaining beverage clarity when
desired. Various additives may also be used in the beverage compositions
10 of the present invention, such as flavoring agents, colorants, preservatives,
sweeteners as well as other vitamins, minerals and/or electrolytes.
